

硅橡胶在输变电应用方面的经验

Experience with Silicone Rubber In T&D Application

Aims

Thanks to their special characteristics, elastomers made of organic silicone are widely used in all branches of industry. This training course is mainly intended for students who have just begun to get involved in the field of organic silicone elastomers. They will learn basic know-how of silicone rubbers, and processing methods of silicone rubbers in theory and practice.

Contents

- Basic knowledge of organic silicone,
- application of organic silicone elastomers in the field of T&D,
- types of silicone rubber,
- characteristics of organic silicone elastomers,
- contrasting various types of silicone rubber,
- technology and long-term experience with applications and usage.

Your instructors

Our WACKER ACADEMY instructors are for the most part WACKER technical service managers. They have extensive experience and specialised know-how from their long years of working for WACKER.

The instructors who are in charge with teaching practical laboratory work also have extensive experience in recipe design and testing processes.

Our dedicated team strives to meet your training expectations. We also are looking forward to answer any questions you may have and to provide you with solutions for any issues that are of concern to you.
