

Implementation of ISO 45001:2018 Occupational Health and Safety at WACKER

ISO 45001:2018 has replaced BS OHSAS 18001:2007 as the basis for Wacker Chemie AG's occupational health and safety management system. This ISO norm applies to health and safety in a company's operational processes and in its work conditions and environment.

All of Wacker Chemie's internal processes will be aligned with ISO 45001:2018.

Wacker Chemie's directive on "Organizing Safety group wide" (Directive A 07-01-04) specifies the responsibilities and principles for meeting safety standards. The directive sets out minimum requirements for site-specific processes and organizational structures. A Safety checklist (structured as per ISO 45001) contains the details. All Wacker Chemie sites should use the checklist, which is mandated by the directive.

At present, a groupwide certification to ISO 45001:2018 is not planned. Some sites have already gained certification.
