

WACKER POLYSILICON

EMERGING POTENTIAL FOR SOLAR ENERGY

Wacker Chemie AG, February, 2012

CREATING TOMORROW'S SOLUTIONS

DISCLAIMER

The information contained in this presentation is for background purposes only and is subject to amendment, revision and updating. Certain statements contained in this presentation may be statements of future expectations and other forward-looking statements that are based on management's current views and assumptions and involve known and unknown risks and uncertainties. In addition to statements which are forward-looking by reason of context, including without limitation, statements referring to risk limitations, operational profitability, financial strength, performance targets, profitable growth opportunities, and risk adequate pricing, as well as the words "may, will, should, expects, plans, intends, anticipates, believes, estimates, predicts, or continue", "potential, future, or further", and similar expressions identify forward-looking statements. By their nature, forward-looking statements involve a number of risks, uncertainties and assumptions which could cause actual results or events to differ materially from those expressed or implied by the forward-looking statements. These include, among other factors, changing business or other market conditions and the prospects for growth anticipated by the Company's management. These and other factors could adversely affect the outcome and financial effects of the plans and events described herein. Statements contained in this presentation regarding past trends or activities should not be taken as a representation that such trends or activities will continue in the future. The Company does not undertake any obligation to update or revise any statements contained in this presentation, whether as a result of new information, future events or otherwise. In particular, you should not place undue reliance on forward-looking statements, which speak only as of the date of this presentation.

TABLE OF CONTENTS

- Photovoltaics Market Size and Market Structure
- Photovoltaics Status: Cost, Efficiency, Environment
- WACKER Update
- Summary

PV MARKET 2011: ANOTHER YEAR OF STRONG GROWTH

Photovoltaic-Volume (GW)

* WACKER estimate, based on published reports; LCOE ... Levelized Cost of Electricity

Market Dynamics 2011

- Top PV players with strong growth of shipments in 2011 compared to FY 2010
- Significant overcapacities on wafer/cell/module level
- Players with competitive advantage continue to outperform its peers

Current & Future Growth Drivers

- PV markets are rapidly growing & diversifying due to steadily decreasing PV system prices and LCOE
- PV competitive with other Renewables (e.g. wind) and also with conventional power plants (e.g. gas) in the near future

DECLINING PRICES OPEN UP NEW PV MARKETS – USA AND ASIA WITH HIGH GROWTH POTENTIAL

Country	New Installations (MW)				CAGR 09-12
	2009	2010	2011e	2012e	
France	300	700	1,300 - 1,400	1,800 - 2,200	80-90%
Germany	3,800	7,400	7,500	3,500 - 5,000	0-10%
Italy	700	4,000	7,000 - 7,500	3,500 - 5,000	70-90%
Rest of Europe	1,100	2,600	2,400 - 2,800	2,900 - 3,300	35-45%
Australia	100	400	500 - 600	900 - 1,200	110-130%
China	200	700	1,700 - 2,000	3,600 - 4,500	160-180%
Japan	500	1,000	1,300 - 1,600	3,200 - 3,800	90-100%
USA	500	900	1,800 - 2,200	3,600 - 4,500	90-110%
Rest of World	300	600	1,400 - 2,200	3,500 - 4,000	130-140%
TOTAL	7.5 GW	~18 GW	~25 - 28 GW	~27 - 33 GW	50-65%

CRYSTALLINE PV CONTINUES TO BE THE DOMINATING TECHNOLOGY FOR THE FORESEEABLE FUTURE

PV Market Shares 2011e

Market Dynamics

- Crystalline silicon PV with leading competitive position versus ThinFilm
- ThinFilm strongly dominated by market leader First Solar (CdTe)
- CIGS with future potential, albeit mass production not proven yet
- Amorphous Si struggles due to high cost structure and low efficiencies
- Crystalline silicon PV with high cost reduction and efficiency potential

Cost reduction of c-Si vs. ThinFilm will be decisive for future development

Sources: Market surveys, industry announcements, WACKER analysis

CONTINUOUS TREND TOWARDS INCREASING MODULE EFFICIENCIES FAVORS ADVANCED C-Si TECHNOLOGY

Development of Module Efficiencies (%)

Source: market surveys, industry announcements, WACKER estimates

Comments

- Module efficiencies are continuously increasing – highest efficiencies with monocrystalline solar cells
- CdTe based modules are losing ground compared to c-Si technology
- Module efficiencies with high impact on overall module manufacturing costs
- High quality polysilicon supports highest solar cell efficiencies and best practice processes, yields & cost structure

SILICON ADVANTAGE OVER THIN FILM – LOWER PV SYSTEM COSTS (1.26 vs. 1.46 €/Wp)

Status 12/2011

Typical Roof Top System Cost Structures (€/Wp)

- Photovoltaics Status: Cost, Efficiency, Environment
- WACKER Update
- Summary

LEVELIZED COST OF PV ELECTRICITY IMPROVING – SOON COMPETITIVE TO WIND AND GAS

PV System Price (€/Wp)

(Germany, ground-mounted)

LCOE* (€Cent/kWh), 30 years

(Germany, ground-mounted)

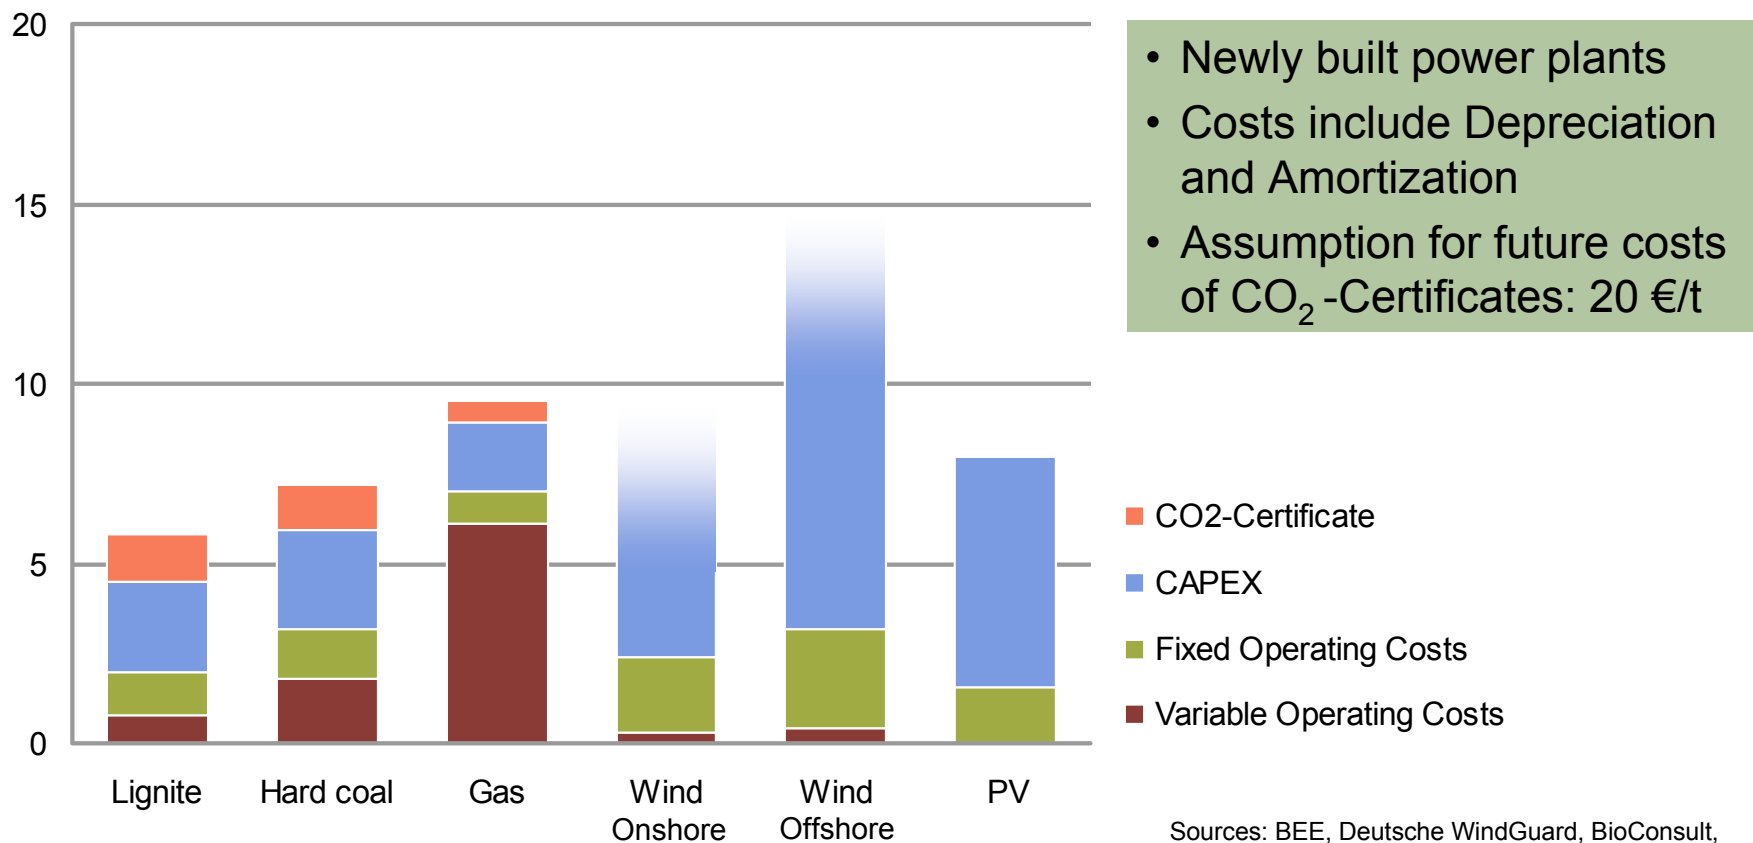

Source: LBBW 02/2009, Industry announcements, WACKER Analysis

* LCOE ... Levelized Cost of Electricity

VARIABLE OPERATING COSTS OF PV AND WIND ARE NEARLY ZERO

Levelized Cost of Electricity (LCOE) of Various Energy Sources (€Ct/kWh), 2015

- Newly built power plants
- Costs include Depreciation and Amortization
- Assumption for future costs of CO₂ -Certificates: 20 €/t

Sources: BEE, Deutsche WindGuard, BioConsult, IER, WACKER estimates

THE ENERGY BALANCE OF PV IS VERY ATTRACTIVE

Energy Payback Time of PV decreased to about 1 year

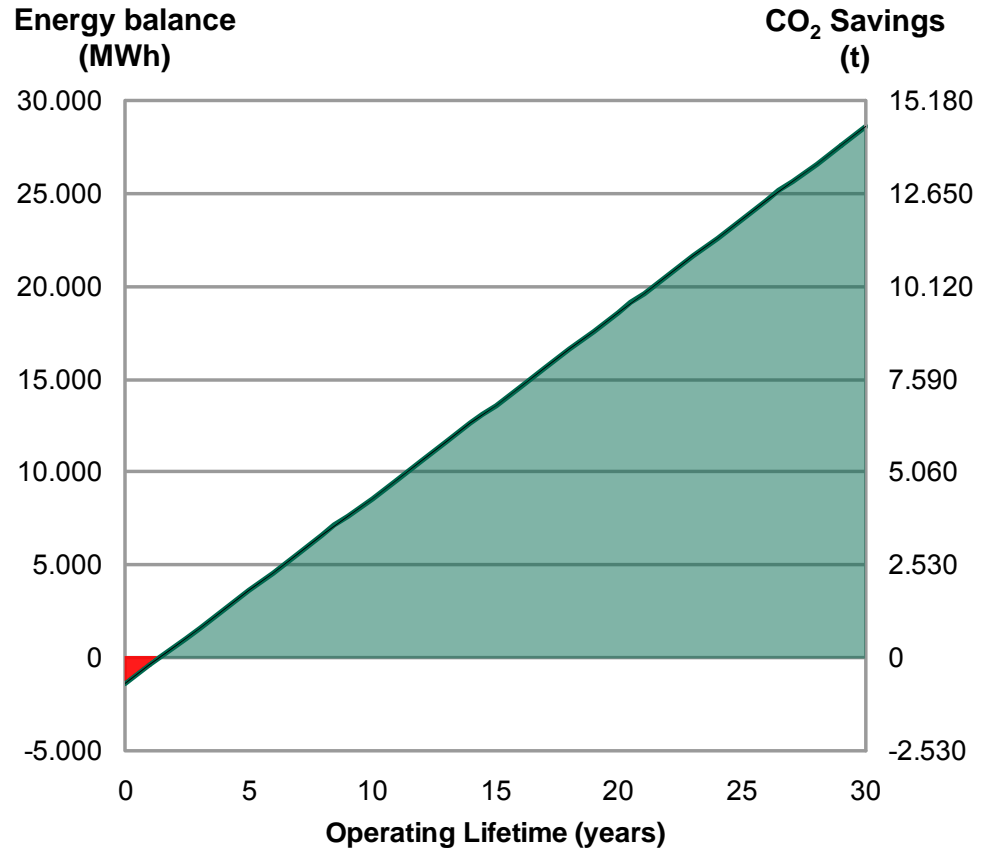

CO₂ Emissions of PV sum up to ~15 g/kWh (at 30 years lifetime)

* crystalline Silicon Modules, located in Southern Europe, European Energy Mix

Net Energy Balance and CO₂ Savings for a 1 MW PV (Location: Southern Germany)

Sources: EPIA factsheets, WACKER Analysis

CO₂-ABATEMENT COSTS OF PHOTOVOLTAICS HAVE BEEN COMING DOWN TO BELOW 100 € PER TON

Fast decreasing LCOE* of PV
(40 €/kWh in 2006, 15 €/kWh in 2011, 8 €/kWh in 2015)

Assuming constant power productions costs of a coal-fired power plant
(5.9 €/kWh)

CO₂ emissions for the production of a PV system:
15 g/kWh

∅ CO₂ emissions of fossil power plants
(600 g/kWh)

CO₂ Avoidance Costs of PV (€/t CO₂; 2006 – 2015)

CO₂ Avoidance Costs of various Energy Sources (€/t CO₂; 2020+)

Sources: WACKER Analysis, RWE Zukunftsstudie 2009
* LCOE ... Levelized Cost of Electricity

PV AND WIND WITH HIGHEST AREA EFFICIENCY AMONG ALL RENEWABLE ENERGY SOURCES

Area Consumption (MW/ha)

Assumptions PV:

- Crystalline Silicon Technology (≤ 3 ha/MWp)
- Area suitable for ground-mounted PV in Southern Germany

→ **>35 GWh/km²**

Assumptions Wind:

- Space required ≤ 7 ha per MWp
- 3,000 kWh/kWp per year

→ **>45 GWh/km²**

Assumptions Biomass:

- Depending on soil type, product and biomass yield

→ **<<10 GWh/km²**

Area Efficiency (GWh/km²)

Sources: BMU, BWE, Enercon, Enertrag

PV ELECTRICITY IS THE FAVORITE DECENTRALIZED ENERGY SOURCE

Advantages of PV Electricity

- Lifetime of more than 25 years
- Self-used PV electricity protects against energy inflation
- Daily electricity demand peaks correspond to PV production
- Lowest cash-costs of all renewables, low maintenance
- PV can be installed at the place of consumption →
Low resources for grid adjustments

WACKER POLYSILICON – STRONG SALES GROWTH

Sales Growth (€m)

EBITDA Margins

* preliminary results

GROWING WITH THE MARKET – FULL PRODUCTION POTENTIAL AT ALL PLATFORMS UP TO 150KT

Actual Polysilicon Shipments and Planned Year-End Capacities (kt)

The ramp of Poly 11 plant in Tennessee will start in late 2013

FORMIDABLE INCREASE OF LABOR PRODUCTIVITY

Labor Productivity of WACKER's Polysilicon Process

- ✓ Economies of scale
- ✓ Yield improvements
- ✓ Automation

SUBSTANTIAL REDUCTION OF ENERGY CONSUMPTION

Specific Energy Consumption of WACKER's Polysilicon Process (average value of total production)

- ✓ Innovations:
 - New deposition reactors
 - New conversion reactors
- ✓ New process design

HIGH QUALITY POLYSILICON HELPS TO MAXIMIZE VALUE FOR OUR CUSTOMERS

WACKER Total Quality Approach

- Reliable shipment dates and proven ability to ramp new capacities
→ secure fab loading for our customers
- Lowest impurity levels with extreme production stability
→ no risk for wafer production
→ highest cell efficiencies
→ lowest conversion costs and highest ASP for our customers

Cell Efficiency Distribution (schematic)

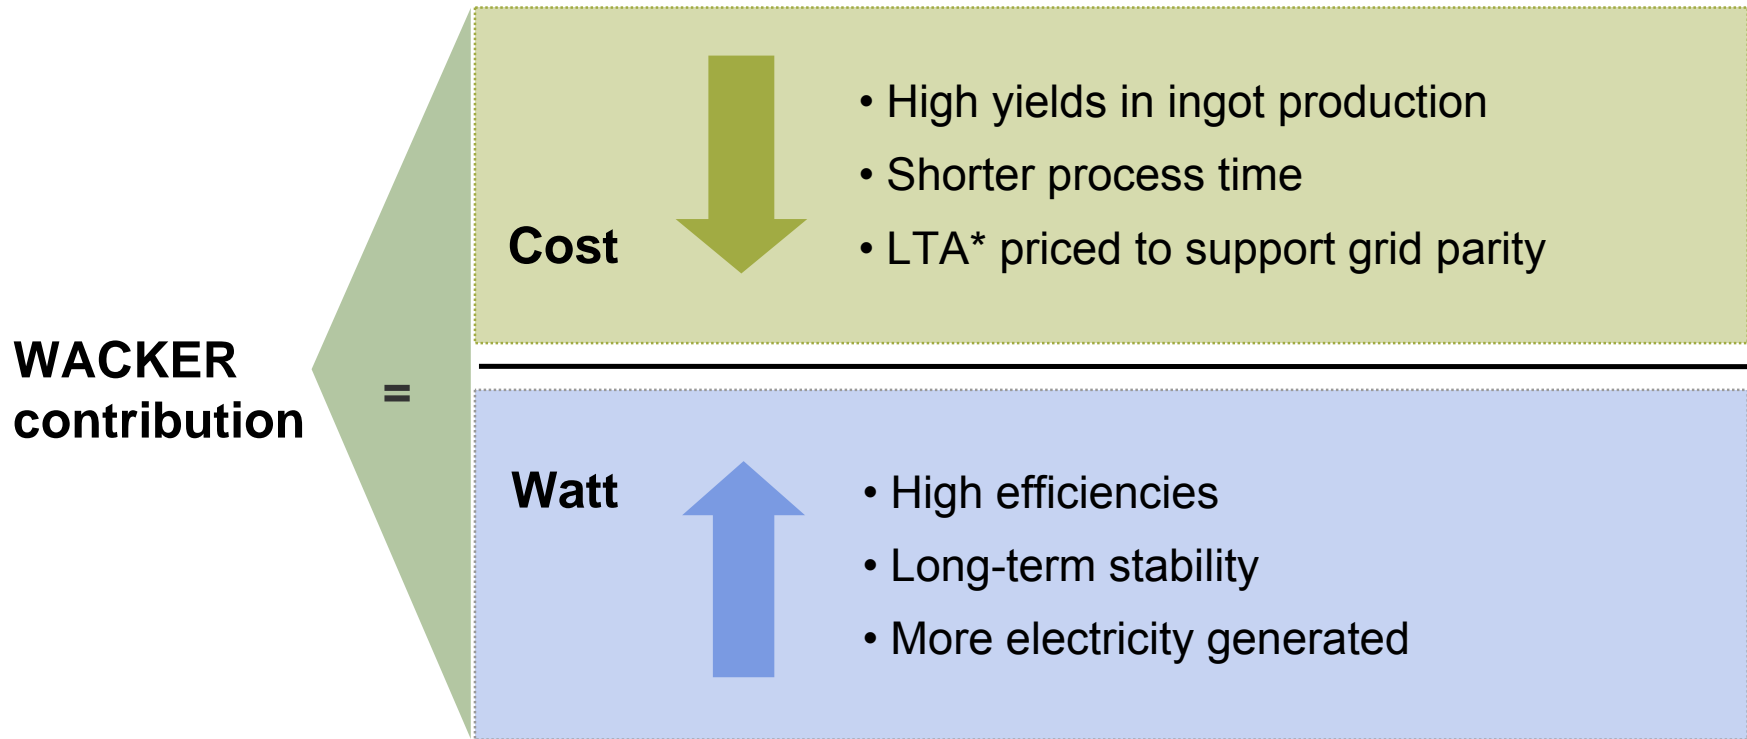

LEADING POLYSILICON PRODUCERS WITH COMPETITIVE ADVANTAGE

Relative Cost Position of Polysilicon Competitors

SOLAR PV: COST PER WATT DEFINES GROWTH POTENTIAL

- Providing customer individual solutions via prepaid LTA's
- Enabling industry transition to high efficiency cells

*LTA = Long-Term Agreement

POLY 0 – 8 AS INTEGRATED PART OF WACKER'S CHEMICAL PLANT IN BURGHAUSEN (GERMANY)

POLY 9 NÜNCHRITZ (GERMANY) CONSTRUCTION UPDATE: RAMP UP STARTED IN LATE AUGUST 2011

INTRODUCTION OF NEW EQUIPMENT AT THE TENNESSEE SITE TO IMPROVE OUR COST POSITION

New deposition reactor:

- Higher output
- Lower energy consumption

New conversion reactor:

- Higher output
- Lower energy consumption

Improved crushing technology:

- Higher productivity
- Higher quality

POLY 11 CHARLESTON (TN, USA) (JANUARY 2012) – OPTIMIZING PLANT LAYOUT TO 18 KT

TABLE OF CONTENTS

- Photovoltaics Market Size and Market Structure
- Photovoltaics Status: Cost, Efficiency, Environment
- WACKER Update
- Summary

LEADING COST POSITION SUPPORTS FUTURE GROWTH OF POLYSILICON BUSINESS

Summary

- Strong PV growth expected in the future due to fast decreasing levelized cost of electricity (LCOE)
- Crystalline Silicon PV is highly competitive
- High-purity polysilicon is crucial to enable high yields for customers
- 20 % module efficiency should be the industry target for the mid-term to guarantee the political and economical success of PV
- WACKER is well prepared to support future market growth
