Permanently soft and yet extremely absorbent textiles – our new generation of silicone softeners makes this property combination possible. Take a look for yourself.

### Innovative Properties

Functional textiles have to meet ever higher demands. A good towel should be wonderfully soft yet also have hydrophilic properties. The same applies to modern clothing textiles: the wearer expects a soft hand combined with optimal moisture management. Only textiles boasting both properties can satisfy today's increased wearer-comfort demands. Nowadays, no consumer will wear a garment which doesn't feel good because it scratches or rubs, even if it offers perfect moisture control.

WACKER's new generation of silicone softeners, which combine and optimally balance these two finishing properties of softness and hydrophilicity, are impressive.

WETSOFT® products ensure optimum performance on all kinds of fiber-based textiles.

WETSOFT® TE 1012 provide a special balance among soft hand, hydrophilicity and stability, can be used as itself, diluted or in combination with organic components. WETSOFT® TE 1012 is highly recommended to be applied in terry towels, due high performance

in hydrophilicity and smooth hand feel, provide superior comfort to final users. In synthetic fabrics WETSOFT® TE 1012 yields a cold hand feel, perfect fit and fresh sensation to sports-wear and summer garments.
