Applications

- Polyurethane Processing
Application details

WACKER® TNE 50 is used for the formulation of release agents for the thermal moulding of rubber, plastics, and low-melting non-ferrous metals. The active ingredient of WACKER® TNE 50 is a modified silicone fluid whose special chemical structure imbues it with the benefits of silicone fluids and mineral oils. It is mainly recommended for release problems where the demoulded parts are subsequently painted, printed, coated or bonded. The specific non-ionic emulsifier system in WACKER® TNE 50 facilitates the combination with emulsions of other actives. In addition, WACKER® TNE 50 may be easily diluted with water at any time. Though being diluted, it exhibits good storage stability. However, preliminary trials on compatibility and stability must be performed.

Before use, WACKER® TNE 50 must be stirred thoroughly.

Packaging and storage

Storage

The 'Best use before end' date of each batch is shown on the product label. Storage beyond the date specified on the label does not necessarily mean that the product is no longer usable. In this case however, the properties required for the intended use must be checked for quality assurance reasons.

Safety notes

Comprehensive instructions are given in the corresponding Material Safety Data Sheets. They are available on request from WACKER subsidiaries or may be printed via WACKER web site http://www.wacker.com.
