

GENIOSIL[®] DAPTM

GENIOSIL[®]

Organofunctional Silanes

N-(2-Aminoethyl)-3-aminopropyltrimethoxysilane

GENIOSIL[®] DAPTM is a clear, colorless to light yellow liquid with a characteristic amine odor.

CAS No. 1760-24-3 | Empirical formula $C_8H_{22}N_2O_3Si$ | Molecular weight 222,36

Properties

GENIOSIL[®] DAPTM is an alkoxy silane with an amino-functional group. Due to the nature of its amino group, GENIOSIL[®] DAPTM reacts as a strong base. The silane hydrolyzes autocatalytically in the presence of moisture (methanol is released) to form silanols, which can then react with themselves to produce siloxanes or can bind to inorganic substrates. As a typical amine, GENIOSIL[®] DAPTM can also interact with numerous organic polymers and thus function as a molecular bridge between organic and inorganic substrates.

Technical data

General Characteristics

Property	Condition	Value	Method
Amine number	-	8.8 - 9.05 mmol/g	WSTM 1297
Boiling point	16 hPa	147 °C	-
Ethylenediamine	-	≤ 0.099 %	-
Flash point	-	> 100 °C	EN 22719
Ignition temperature	-	300 °C	DIN 51794
Purity	-	> 96 %	-
Refractive index	25 °C	1.443	-
Tetramethoxysilane	-	≤ 0.099 %	-

All the information provided is in accordance with the present state of our knowledge. Nonetheless, we disclaim any warranty or liability whatsoever and reserve the right, at any time, to effect technical alterations. The information provided, as well as the product's fitness for an intended application, should be checked by the buyer in preliminary trials. Contractual terms and conditions always take precedence. This disclaimer of warranty and liability also applies particularly in foreign countries with respect to third parties' rights.

Applications

- Adhesives
- Building & Construction Adhesives
- Chemical Industry
- Composites
- Industrial Adhesives
- Industrial Coatings
- Primers for Paints & Coatings
- Sealants
- Thermoplastics & Elastomers

Application details

1. General processing information: GENIOSIL® DAPTM is highly miscible with organic solvents, such as ethers and hydrocarbons. Mixing with ketones results in imine formation, while mixing with alcohols other than methanol leads to an autocatalytic exchange of alkoxy groups until the system reaches the thermodynamic equilibrium. GENIOSIL® DAPTM demonstrates typical amine behavior when exposed to acids, epoxides or isocyanates. GENIOSIL® DAPTM is highly soluble in neutral water. Caution: due to the enthalpy of solution, mixing GENIOSIL® DAPTM with water is exothermic. It is recommended that GENIOSIL® DAPTM is added to water, not vice versa, while stirring. A 2 wt % solution of GENIOSIL® DAPTM in water has a pH of 10 -11 and remains stable for several weeks. Due to the reactive nature of GENIOSIL® DAPTM, contact with moisture must be avoided during prevent undesired hydrolysis.
2. GENIOSIL® DAPTM in glass-fiber reinforced or mineral-filled polymers: Fillers are treated either with pure GENIOSIL® DAPTM or a solution thereof. It may be necessary to pretreat the substrate with water. The modified filler is preferably bonded to the organic material, e.g. an epoxy resin, by mixing it with a standard amine curing agent. In an alternative procedure referred to as "blending", GENIOSIL® DAPTM is added directly to the polymer - either before the organic materials is compounded with the filler or at the same time. A prerequisite for the blending process is that GENIOSIL® DAPTM and the polymer are compatible and that the resin and GENIOSIL® DAPTM do not react prematurely.
3. GENIOSIL® DAPTM as a surface modifier: Used as a primer, GENIOSIL® DAPTM is applied as an aqueous or organic solution to an inorganic substrate (e.g. metal or glass surfaces). Once GENIOSIL® DAPTM has dried and bonded to the surface, an organic coating may be applied using a standard technique (e.g. spraying or knife coating). GENIOSIL® DAPTM is mainly used as a surface modifier for glass fibers, glass-fiber fabrics, fillers (e.g. glass or mineral wool, mica, talc, wollastonite, kaolin, cristobalite, metal oxides) and pigments used in various plastics, including epoxy resins, polyamides, polyacrylates, polyurethanes, ethylene/vinyl acetate copolymers and many others. Other important applications include its uses as an adhesion promoter in polysulfides and phenolic resins for abrasives and insulating materials and as a primer for sealants, adhesives and coatings.

Packaging and storage

Packaging

Information on available container sizes is obtainable from WACKER subsidiaries.

Storage

The 'Best use before end' date of each batch is shown on the product label. Storage beyond the date specified on the label does not necessarily mean that the product is no longer usable. In this case however, the properties required for the intended use must be checked for quality assurance reasons.

Safety notes

Comprehensive instructions are given in the corresponding Material Safety Data Sheets. They are available on request from WACKER subsidiaries or may be printed via WACKER web site <http://www.wacker.com>.
